

Project Commander is the leading project planning software for individuals and small companies - thanks to cost and ease of use.

Project Commander is one of the easiest to use and the most cost effective planning solutions around today and can exchange information with Microsoft Project, PowerProject and Primavera.

Cost advantage

The cost of single licence for a stand-alone or for a network is only £375. For office based staff for £375, all staff can have access to Project Commander. Further licences cost only £175 (a 55% discount). This means massive savings against competitors such as PowerProject - where one licence costs nearly £1100 (including Maintenance) with minimal extra user discounts; and Microsoft Project 2007 (Standard) which costs around £400 and there is no network version.

Easier to use

Since Project Commander is WYSIWYG, what you see on the screen is exactly how it prints. It is highly graphical and allows you to draw bars, link bars and move bars with the mouse. It fits the chart exactly to the page. Microsoft Project is notoriously awkward when it comes to printing.

Project Commander can be used by non planners and administrative staff to create short-term plans or update contract programmes. Anyone can create a professional Tender plan quickly with little training.

Competitive features

Despite being the market leader, Microsoft Project lacks many features. There is an extensive comparison with MS Project on our website, along with a full list of all features.

As far as Microsoft Project is concerned, Project Commander is far easier to use and is superior in 90% of comparable features.

Compatibility with Microsoft Project

Project Commander can directly open MPP files produced by MS Project 2000-2007 and then you can change information and save the file as a MPX file that can be opened by any version of MS Project.

Training

Project Commander can be used straight out of the box with no training. You will never need more than one day's training to get to grips with most of Project Commander's features - unlike our competitors.

We offer training at your office or low cost live short courses over the internet at times to suit you - even out of hours or at weekends. All trainers are our own staff and are experienced construction IT planning experts.

Free PDF Writer and Project Viewer

Project Commander comes with a free Viewer that is on the install CD or can be downloaded off the web. This allows both users and clients to view/print project files without the ability to change data & without the cost of any licence.

Added to this we also include a PDF Writer in the installation programme for each user.

Multiple installs

Authorised users are allowed to install on more than one pc - for instance at home and office or on a desktop and laptop.

Server option

To save costs and make people more productive, Project Commander offers a networked version at

Unique money back guarantee

PMSC are the only company that offers a full no quibble money back guarantee if the product does not perform as you expected.

To help you evaluate

You can download from our website a full working version - but limited to 15 tasks and does not save. We also can provide you with step by step multi media tutorials with full audio.

If you prefer a human touch, we can perform a live demo over the internet in the comfort of your office or even out of hours at home.

Client list

Since 1995, Project Commander has had over 30,000 users in 5,000 companies all over the UK and Ireland.

There is a list of recent purchasers on our website.

no extra cost, that allows multiple people to access the system from a server (but only one user per file). Licences are based on concurrent users (ie people using it at the same time) and therefore you can install the client software on as many workstations as required at minimal cost.
